903. Valid Permutations for DI Sequence

Description

You are given a string `s` of length `n` where `s[i]` is either:

- `'D'` means decreasing, or
- `'I'` means increasing.

A permutation `perm` of `n + 1` integers of all the integers in the range `[0, n]` is called a **valid permutation** if for all valid `i`:

- If `s[i] == 'D'`, then `perm[i] > perm[i + 1]`, and
- If `s[i] == 'I'`, then `perm[i] < perm[i + 1]`.

Return *the number of* ***valid permutations*** `perm`. Since the answer may be large, return it **modulo** $10^9 + 7$.

Example 1:

```
Input: s = "DID"
Output: 5
Explanation: The 5 valid permutations of (0, 1, 2, 3) are:
(1, 0, 3, 2)
(2, 0, 3, 1)
(2, 1, 3, 0)
(3, 0, 2, 1)
(3, 1, 2, 0)
```

Example 2:

```
Input: s = "D"
Output: 1
```

Constraints:

- `n == s.length`
- `1 <= n <= 200`
- `s[i]` is either `'I'` or `'D'`.
