2418. Sort the People

Description

You are given an array of strings `names`, and an array `heights` that consists of **distinct** positive integers. Both arrays are of length `n`.

For each index `i`, `names[i]` and `heights[i]` denote the name and height of the `i th` person.

Return `names` *sorted in* ***descending*** *order by the people's heights*.

Example 1:

```
Input: names = ["Mary","John","Emma"], heights = [180,165,170]
Output: ["Mary","Emma","John"]
Explanation: Mary is the tallest, followed by Emma and John.
```

Example 2:

```
Input: names = ["Alice","Bob","Bob"], heights = [155,185,150]
Output: ["Bob","Alice","Bob"]
Explanation: The first Bob is the tallest, followed by Alice and the second Bob.
```

Constraints:

- `n == names.length == heights.length`
- `1 <= n <= 10 3`
- `1 <= names[i].length <= 20`
- `1 <= heights[i] <= 10 5`
- `names[i]` consists of lower and upper case English letters.
- All the values of `heights` are distinct.
