

145. Binary Tree Postorder Traversal

Description

Given the `root` of a binary tree, return *the postorder traversal of its nodes' values*.

Example 1:

Input: `root = [1,null,2,3]`

Output: `[3,2,1]`

Example 2:

Input: `root = []`

Output: `[]`

Example 3:

Input: `root = [1]`

Output: `[1]`

Constraints:

- The number of the nodes in the tree is in the range `[0, 100]`.
- `-100 <= Node.val <= 100`

Follow up: Recursive solution is trivial, could you do it iteratively?
