

# 1517. Find Users With Valid E-Mails

## Description

Table: `Users`

Column Name	Type
<code>user_id</code>	<code>int</code>
<code>name</code>	<code>varchar</code>
<code>mail</code>	<code>varchar</code>

`user_id` is the primary key (column with unique values) for this table.  
This table contains information of the users signed up in a website. Some e-mails are invalid.

Write a solution to find the users who have **valid emails**.

A valid e-mail has a prefix name and a domain where:

- **The prefix name** is a string that may contain letters (upper or lower case), digits, underscore `'_'`, period `'.'`, and/or dash `'-'`. The prefix name **must** start with a letter.
- **The domain** is `'@leetcode.com'`.

Return the result table in **any order**.

The result format is in the following example.

### Example 1:

<b>Input:</b>		
Users table:		
<code>user_id</code>	<code>name</code>	<code>mail</code>
1	Winston	winston@leetcode.com
2	Jonathan	jonathanisgreat
3	Annabelle	bella@leetcode.com
4	Sally	sally.come@leetcode.com
5	Marwan	quarz#2020@leetcode.com
6	David	david69@gmail.com
7	Shapiro	.shapo@leetcode.com
<b>Output:</b>		
<code>user_id</code>	<code>name</code>	<code>mail</code>
1	Winston	winston@leetcode.com
3	Annabelle	bella@leetcode.com
4	Sally	sally.come@leetcode.com
<b>Explanation:</b>		
The mail of user 2 does not have a domain.		
The mail of user 5 has the # sign which is not allowed.		
The mail of user 6 does not have the leetcode domain.		
The mail of user 7 starts with a period.
