

515. Find Largest Value in Each Tree Row

Description

Given the `root` of a binary tree, return *an array of the largest value in each row* of the tree (0-indexed).

Example 1:

Input: `root = [1,3,2,5,3,null,9]`

Output: `[1,3,9]`

Example 2:

Input: `root = [1,2,3]`

Output: `[1,3]`

Constraints:

- The number of nodes in the tree will be in the range `[0, 104]`.
- `-231 ≤ Node.val ≤ 231 - 1`
