

2413. Smallest Even Multiple

Description

Given a **positive** integer `n`, return *the smallest positive integer that is a multiple of both* `2` *and* `n`.

Example 1:

Input: `n = 5`

Output: `10`

Explanation: The smallest multiple of both 5 and 2 is 10.

Example 2:

Input: `n = 6`

Output: `6`

Explanation: The smallest multiple of both 6 and 2 is 6. Note that a number is a multiple of itself.

Constraints:

- `1 <= n <= 150`
