

# 1649. Create Sorted Array through Instructions

## Description

Given an integer array `instructions` , you are asked to create a sorted array from the elements in `instructions` . You start with an empty container `nums` . For each element from **left to right** in `instructions` , insert it into `nums` . The **cost** of each insertion is the **minimum** of the following:

- The number of elements currently in `nums` that are **strictly less than** `instructions[i]` .
- The number of elements currently in `nums` that are **strictly greater than** `instructions[i]` .

For example, if inserting element `3` into `nums = [1,2,3,5]` , the **cost** of insertion is `min(2, 1)` (elements `1` and `2` are less than `3` , element `5` is greater than `3` ) and `nums` will become `[1,2,3,3,5]` .

Return *the total cost to insert all elements from* `instructions` *into* `nums` . Since the answer may be large, return it **modulo** `109 + 7`

### Example 1:

```
Input: instructions = [1,5,6,2]
Output: 1
Explanation: Begin with nums = [].
Insert 1 with cost min(0, 0) = 0, now nums = [1].
Insert 5 with cost min(1, 0) = 0, now nums = [1,5].
Insert 6 with cost min(2, 0) = 0, now nums = [1,5,6].
Insert 2 with cost min(1, 2) = 1, now nums = [1,2,5,6].
The total cost is 0 + 0 + 0 + 1 = 1.
```

### Example 2:

```
Input: instructions = [1,2,3,6,5,4]
Output: 3
Explanation: Begin with nums = [].
Insert 1 with cost min(0, 0) = 0, now nums = [1].
Insert 2 with cost min(1, 0) = 0, now nums = [1,2].
Insert 3 with cost min(2, 0) = 0, now nums = [1,2,3].
Insert 6 with cost min(3, 0) = 0, now nums = [1,2,3,6].
Insert 5 with cost min(3, 1) = 1, now nums = [1,2,3,5,6].
Insert 4 with cost min(3, 2) = 2, now nums = [1,2,3,4,5,6].
The total cost is 0 + 0 + 0 + 0 + 1 + 2 = 3.
```

### Example 3:

```
Input: instructions = [1,3,3,3,2,4,2,1,2]
Output: 4
Explanation: Begin with nums = [].
Insert 1 with cost min(0, 0) = 0, now nums = [1].
Insert 3 with cost min(1, 0) = 0, now nums = [1,3].
Insert 3 with cost min(1, 0) = 0, now nums = [1,3,3].
Insert 3 with cost min(1, 0) = 0, now nums = [1,3,3,3].
Insert 2 with cost min(1, 3) = 1, now nums = [1,2,3,3,3].
Insert 4 with cost min(5, 0) = 0, now nums = [1,2,3,3,3,4].
Insert 2 with cost min(1, 4) = 1, now nums = [1,2,2,3,3,3,4].
Insert 1 with cost min(0, 6) = 0, now nums = [1,1,2,2,3,3,3,4].
Insert 2 with cost min(2, 4) = 2, now nums = [1,1,2,2,2,3,3,3,4].
The total cost is 0 + 0 + 0 + 0 + 1 + 0 + 1 + 0 + 2 = 4.
```

### Constraints:

- `1 <= instructions.length <= 105`
- `1 <= instructions[i] <= 105`
