

# 1173. Immediate Food Delivery I

## Description

Table: Delivery

Column Name	Type
delivery_id	int
customer_id	int
order_date	date
customer_pref_delivery_date	date

delivery\_id is the primary key (column with unique values) of this table.

The table holds information about food delivery to customers that make orders at some date and specify a preferred delivery date (on the same order date or after it).

If the customer's preferred delivery date is the same as the order date, then the order is called **immediate**; otherwise, it is called **scheduled**.

Write a solution to find the percentage of immediate orders in the table, **rounded to 2 decimal places**.

The result format is in the following example.

### Example 1:

Input:			
Delivery table:			
delivery_id	customer_id	order_date	customer_pref_delivery_date
1	1	2019-08-01	2019-08-02
2	5	2019-08-02	2019-08-02
3	1	2019-08-11	2019-08-11
4	3	2019-08-24	2019-08-26
5	4	2019-08-21	2019-08-22
6	2	2019-08-11	2019-08-13
Output:			
immediate_percentage			
33.33			
Explanation: The orders with delivery id 2 and 3 are immediate while the others are scheduled.
