

2758. Next Day

Description

Write code that enhances all date objects such that you can call the `date.nextDay()` method on any date object and it will return the next day in the format *YYYY-MM-DD* as a string.

Example 1:

```
Input: date = "2014-06-20"  
Output: "2014-06-21"  
Explanation:  
const date = new Date("2014-06-20");  
date.nextDay(); // "2014-06-21"
```

Example 2:

```
Input: date = "2017-10-31"  
Output: "2017-11-01"  
Explanation: The day after 2017-10-31 is 2017-11-01.
```

Constraints:

- `new Date(date)` is a valid date object
