

2270. Number of Ways to Split Array

Description

You are given a **0-indexed** integer array `nums` of length `n`.

`nums` contains a **valid split** at index `i` if the following are true:

- The sum of the first `i + 1` elements is **greater than or equal to** the sum of the last `n - i - 1` elements.
- There is **at least one** element to the right of `i`. That is, `0 <= i < n - 1`.

Return *the number of valid splits in* `nums`.

Example 1:

Input: `nums = [10,4,-8,7]`

Output: 2

Explanation:

There are three ways of splitting `nums` into two non-empty parts:

- Split `nums` at index 0. Then, the first part is `[10]`, and its sum is 10. The second part is `[4,-8,7]`, and its sum is 3. Since `10 >= 3`, `i = 0` is a valid split.
- Split `nums` at index 1. Then, the first part is `[10,4]`, and its sum is 14. The second part is `[-8,7]`, and its sum is -1. Since `14 >= -1`, `i = 1` is a valid split.
- Split `nums` at index 2. Then, the first part is `[10,4,-8]`, and its sum is 6. The second part is `[7]`, and its sum is 7. Since `6 < 7`, `i = 2` is not a valid split.

Thus, the number of valid splits in `nums` is 2.

Example 2:

Input: `nums = [2,3,1,0]`

Output: 2

Explanation:

There are two valid splits in `nums`:

- Split `nums` at index 1. Then, the first part is `[2,3]`, and its sum is 5. The second part is `[1,0]`, and its sum is 1. Since `5 >= 1`, `i = 1` is a valid split.
- Split `nums` at index 2. Then, the first part is `[2,3,1]`, and its sum is 6. The second part is `[0]`, and its sum is 0. Since `6 >= 0`, `i = 2` is a valid split.

Constraints:

- `2 <= nums.length <= 105`
- `-105 <= nums[i] <= 105`
