

1426. Counting Elements

Description

Given an integer array `arr`, count how many elements `x` there are, such that `x + 1` is also in `arr`. If there are duplicates in `arr`, count them separately.

Example 1:

Input: `arr = [1,2,3]`
Output: 2
Explanation: 1 and 2 are counted cause 2 and 3 are in arr.

Example 2:

Input: `arr = [1,1,3,3,5,5,7,7]`
Output: 0
Explanation: No numbers are counted, cause there is no 2, 4, 6, or 8 in arr.

Constraints:

- `1 <= arr.length <= 1000`
- `0 <= arr[i] <= 1000`
