

2255. Count Prefixes of a Given String

Description

You are given a string array `words` and a string `s`, where `words[i]` and `s` comprise only of **lowercase English letters**.

Return *the number of strings in `words` that are a prefix of `s`*.

A **prefix** of a string is a substring that occurs at the beginning of the string. A **substring** is a contiguous sequence of characters within a string.

Example 1:

```
Input: words = ["a","b","c","ab","bc","abc"], s = "abc"
Output: 3
Explanation:
The strings in words which are a prefix of s = "abc" are:
"a", "ab", and "abc".
Thus the number of strings in words which are a prefix of s is 3.
```

Example 2:

```
Input: words = ["a","a"], s = "aa"
Output: 2
Explanation:
Both of the strings are a prefix of s.
Note that the same string can occur multiple times in words, and it should be counted each time.
```

Constraints:

- `1 <= words.length <= 1000`
- `1 <= words[i].length, s.length <= 10`
- `words[i]` and `s` consist of lowercase English letters **only**.
