

2703. Return Length of Arguments Passed

Description

Write a function `argumentsLength` that returns the count of arguments passed to it.

Example 1:

Input: `args = [5]`
Output: `1`
Explanation:
`argumentsLength(5); // 1`

One value was passed to the function so it should return 1.

Example 2:

Input: `args = [{}, null, "3"]`
Output: `3`
Explanation:
`argumentsLength({}, null, "3"); // 3`

Three values were passed to the function so it should return 3.

Constraints:

- `args` is a valid JSON array
- `0 <= args.length <= 100`
