

# 1859. Sorting the Sentence

## Description

A **sentence** is a list of words that are separated by a single space with no leading or trailing spaces. Each word consists of lowercase and uppercase English letters.

A sentence can be **shuffled** by appending the **1-indexed word position** to each word then rearranging the words in the sentence.

- For example, the sentence `"This is a sentence"` can be shuffled as `"sentence4 a3 is2 This1"` or `"is2 sentence4 This1 a3"`.

Given a **shuffled sentence** `s` containing no more than `9` words, reconstruct and return *the original sentence*.

### Example 1:

**Input:** `s = "is2 sentence4 This1 a3"`

**Output:** `"This is a sentence"`

**Explanation:** Sort the words in `s` to their original positions `"This1 is2 a3 sentence4"`, then remove the numbers.

### Example 2:

**Input:** `s = "Myself2 Me1 I4 and3"`

**Output:** `"Me Myself and I"`

**Explanation:** Sort the words in `s` to their original positions `"Me1 Myself2 and3 I4"`, then remove the numbers.

### Constraints:

- `2 <= s.length <= 200`
- `s` consists of lowercase and uppercase English letters, spaces, and digits from `1` to `9`.
- The number of words in `s` is between `1` and `9`.
- The words in `s` are separated by a single space.
- `s` contains no leading or trailing spaces.
