

# 1403. Minimum Subsequence in Non-Increasing Order

## Description

Given the array `nums`, obtain a subsequence of the array whose sum of elements is **strictly greater** than the sum of the non included elements in such subsequence.

If there are multiple solutions, return the subsequence with **minimum size** and if there still exist multiple solutions, return the subsequence with the **maximum total sum** of all its elements. A subsequence of an array can be obtained by erasing some (possibly zero) elements from the array.

Note that the solution with the given constraints is guaranteed to be **unique**. Also return the answer sorted in **non-increasing** order.

### Example 1:

**Input:** `nums = [4,3,10,9,8]`

**Output:** `[10,9]`

**Explanation:** The subsequences `[10,9]` and `[10,8]` are minimal such that the sum of their elements is strictly greater than the sum of elements not included. However, the subsequence `[10,9]` has the maximum total sum of its elements.

### Example 2:

**Input:** `nums = [4,4,7,6,7]`

**Output:** `[7,7,6]`

**Explanation:** The subsequence `[7,7]` has the sum of its elements equal to 14 which is not strictly greater than the sum of elements not included ( $14 = 4 + 4 + 6$ ). Therefore, the subsequence `[7,6,7]` is the minimal satisfying the conditions. Note the subsequence has to be returned in non-decreasing order.

### Constraints:

- `1 <= nums.length <= 500`
- `1 <= nums[i] <= 100`
