

1077. Project Employees III

Description

Table: `Project`

Column Name	Type
project_id	int
employee_id	int

(project_id, employee_id) is the primary key (combination of columns with unique values) of this table.
employee_id is a foreign key (reference column) to `Employee` table.
Each row of this table indicates that the employee with employee_id is working on the project with project_id.

Table: `Employee`

Column Name	Type
employee_id	int
name	varchar
experience_years	int

employee_id is the primary key (column with unique values) of this table.
Each row of this table contains information about one employee.

Write a solution to report the **most experienced** employees in each project. In case of a tie, report all employees with the maximum number of experience years.

Return the result table in **any order**.

The result format is in the following example.

Example 1:

Input:

Project table:

project_id	employee_id
1	1
1	2
1	3
2	1
2	4

Employee table:

employee_id	name	experience_years
1	Khaled	3
2	Ali	2
3	John	3
4	Doe	2

Output:

project_id	employee_id
1	1
1	3
2	1

Explanation: Both employees with id 1 and 3 have the most experience among the employees of the first project. For the second project, the employee with id 1 has the most experience.
