

1941. Check if All Characters Have Equal Number of Occurrences

Description

Given a string `s`, return `true` if `s` is a **good string**, or `false` otherwise.

A string `s` is **good** if all the characters that appear in `s` have the **same** number of occurrences (i.e., the same frequency).

Example 1:

Input: `s = "abacbc"`

Output: `true`

Explanation: The characters that appear in `s` are 'a', 'b', and 'c'. All characters occur 2 times in `s`.

Example 2:

Input: `s = "aaabb"`

Output: `false`

Explanation: The characters that appear in `s` are 'a' and 'b'.

'a' occurs 3 times while 'b' occurs 2 times, which is not the same number of times.

Constraints:

- `1 <= s.length <= 1000`
- `s` consists of lowercase English letters.
