

# 1209. Remove All Adjacent Duplicates in String II

## Description

You are given a string `s` and an integer `k`, a **duplicate removal** consists of choosing `k` adjacent and equal letters from `s` and removing them, causing the left and the right side of the deleted substring to concatenate together.

We repeatedly make `k` **duplicate removals** on `s` until we no longer can.

Return *the final string after all such duplicate removals have been made*. It is guaranteed that the answer is **unique**.

### Example 1:

**Input:** `s = "abcd", k = 2`  
**Output:** `"abcd"`  
**Explanation:** There's nothing to delete.

### Example 2:

**Input:** `s = "deeedbbcccbdaa", k = 3`  
**Output:** `"aa"`  
**Explanation:**  
First delete "eee" and "ccc", get "ddbbbdaa"  
Then delete "bbb", get "dddaa"  
Finally delete "ddd", get "aa"

### Example 3:

**Input:** `s = "pbbcggtttciiippooaaais", k = 2`  
**Output:** `"ps"`

### Constraints:

- `1 <= s.length <= 105`
- `2 <= k <= 104`
- `s` only contains lowercase English letters.
