## 1635. Hopper Company Queries I

## Description

Table: Drivers

+-----+
| Column Name | Type |
+------+
| driver\_id | int |
| join\_date | date |
+------+

driver\_id is the primary key (column with unique values) for this table.
Each row of this table contains the driver's ID and the date they joined the Hopper company.

Table: Rides

+-----+
| Column Name | Type |
+------+
ride\_id	int
user\_id	int
requested\_at	date
+------+
ride\_id is the primary key (column with unique values) for this table.
Each row of this table contains the ID of a ride, the user's ID that requested it, and the day they requested it.
There may be some ride requests in this table that were not accepted.

Table: AcceptedRides

+-----+
| Column Name | Type |
+------+
ride\_id	int
driver\_id	int
ride\_distance	int
ride\_duration	int
+-----+
ride\_id is the primary key (column with unique values) for this table.
Each row of this table contains some information about an accepted ride.
It is guaranteed that each accepted ride exists in the Rides table.

Write a solution to report the following statistics for each month of 2020:

- The number of drivers currently with the Hopper company by the end of the month ( active\_drivers ).
- The number of accepted rides in that month ( accepted\_rides ).

Return the result table ordered by month in ascending order, where month is the month's number (January is 1, February is 2, etc.).

The result format is in the following example.

## Example 1:
