1873. Calculate Special Bonus

Description

Table: Employees

+	++
Column Name	Type
+	++
employee_id	int
name	varchar
salary	int
+	++

employee_id is the primary key (column with unique values) for this table.
Each row of this table indicates the employee ID, employee name, and salary.

Write a solution to calculate the bonus of each employee. The bonus of an employee is 100% of their salary if the ID of the employee is an odd number and the employee's name does not start with the character 'M'. The bonus of an employee is 0 otherwise.

Return the result table ordered by <code>employee_id</code>.

The result format is in the following example.

Example 1:

Employees table:

employee_id 	name	salary
	Meir	
3	Michael	3800
7	Addilyn	7400
8	Juan	6100
9	Kannon	7700

Output:

	employee_id	l	bonus	
į	2		0	
1	3	١	0	
1	7	١	7400	
1	8	١	0	
	9	Ī	7700	

Explanation:

The employees with IDs 2 and 8 get 0 bonus because they have an even employee_id.

The employee with ID 3 gets 0 bonus because their name starts with 'M'.

The rest of the employees get a 100% bonus.
