1893. Check if All the Integers in a Range Are Covered

Description

You are given a 2D integer array `ranges` and two integers `left` and `right`. Each `ranges[i] = [start_i, end_i]` represents an **inclusive** interval between `start_i` and `end_i`.

Return `true` *if each integer in the inclusive range* `[left, right]` *is covered by* **at least one** *interval in* `ranges`. Return `false` *otherwise*.

An integer `x` is covered by an interval `ranges[i] = [start_i, end_i]` if `start_i <= x <= end_i`.

Example 1:

```
Input:  ranges = [[1,2],[3,4],[5,6]], left = 2, right = 5
Output:  true
Explanation: Every integer between 2 and 5 is covered:
- 2 is covered by the first range.
- 3 and 4 are covered by the second range.
- 5 is covered by the third range.
```

Example 2:

```
Input:  ranges = [[1,10],[10,20]], left = 21, right = 21
Output:  false
Explanation: 21 is not covered by any range.
```

Constraints:

- `1 <= ranges.length <= 50`
- `1 <= start_i <= end_i <= 50`
- `1 <= left <= right <= 50`
