3005. Count Elements With Maximum Frequency

Description

You are given an array `nums` consisting of **positive** integers.

Return *the **total frequencies** of elements in* `nums` *such that those elements all have the **maximum** frequency*.

The **frequency** of an element is the number of occurrences of that element in the array.

Example 1:

```
Input: nums = [1,2,2,3,1,4]
Output: 4
Explanation: The elements 1 and 2 have a frequency of 2 which is the maximum frequency in the array.
So the number of elements in the array with maximum frequency is 4.
```

Example 2:

```
Input: nums = [1,2,3,4,5]
Output: 5
Explanation: All elements of the array have a frequency of 1 which is the maximum.
So the number of elements in the array with maximum frequency is 5.
```

Constraints:

- `1 <= nums.length <= 100`
- `1 <= nums[i] <= 100`
