2885. Rename Columns

Description

```
DataFrame students
+-------------+--------+
| Column Name | Type   |
+-------------+--------+
| id          | int    |
| first       | object |
| last        | object |
| age         | int    |
+-------------+--------+
```

Write a solution to rename the columns as follows:

- `id` to `student_id`
- `first` to `first_name`
- `last` to `last_name`
- `age` to `age_in_years`

The result format is in the following example.

```
Example 1:
Input:
+----+----------+-----------+-----+
| id | first    | last      | age |
+----+----------+-----------+-----+
| 1  | Mason    | King      | 6   |
| 2  | Ava      | Wright    | 7   |
| 3  | Taylor   | Hall      | 16  |
| 4  | Georgia  | Thompson  | 18  |
| 5  | Thomas   | Moore     | 10  |
+----+----------+-----------+-----+
Output:
+------------+------------+-----------+--------------+
| student_id | first_name | last_name | age_in_years |
+------------+------------+-----------+--------------+
| 1          | Mason      | King      | 6            |
| 2          | Ava        | Wright    | 7            |
| 3          | Taylor     | Hall      | 16           |
| 4          | Georgia    | Thompson  | 18           |
| 5          | Thomas     | Moore     | 10           |
+------------+------------+-----------+--------------+
Explanation:
The column names are changed accordingly.
```
