1133. Largest Unique Number

Description

Given an integer array `nums` , return *the largest integer that only occurs once* . If no integer occurs once, return `-1` .

Example 1:

```
Input: nums = [5,7,3,9,4,9,8,3,1]
Output: 8
Explanation: The maximum integer in the array is 9 but it is repeated. The number 8 occurs only once, so it is the answer.
```

Example 2:

```
Input: nums = [9,9,8,8]
Output: -1
Explanation: There is no number that occurs only once.
```

Constraints:

- `1 <= nums.length <= 2000`
- `0 <= nums[i] <= 1000`
