2883. Drop Missing Data

Description

```
DataFrame students
+-------------+--------+
| Column Name | Type   |
+-------------+--------+
| student_id  | int    |
| name        | object |
| age         | int    |
+-------------+--------+
```

There are some rows having missing values in the `name` column.

Write a solution to remove the rows with missing values.

The result format is in the following example.

Example 1:

```
Input:
+-------------+----------+-----+
| student_id  | name     | age |
+-------------+----------+-----+
| 32          | Piper    | 5   |
| 217         | None     | 19  |
| 779         | Georgia  | 20  |
| 849         | Willow   | 14  |
+-------------+----------+-----+

Output:
+-------------+----------+-----+
| student_id  | name     | age |
+-------------+----------+-----+
| 32          | Piper    | 5   |
| 779         | Georgia  | 20  |
| 849         | Willow   | 14  |
+-------------+----------+-----+

Explanation:
Student with id 217 havs empty value in the name column, so it will be removed.
```
