1316. Distinct Echo Substrings

Description

Return the number of **distinct** non-empty substrings of `text` that can be written as the concatenation of some string with itself (i.e. it can be written as `a + a` where `a` is some string).

Example 1:

```
Input: text = "abcabcabc"
Output: 3
Explanation: The 3 substrings are "abcabc", "bcabca" and "cabcab".
```

Example 2:

```
Input: text = "leetcodeleetcode"
Output: 2
Explanation: The 2 substrings are "ee" and "leetcodeleetcode".
```

Constraints:

- `1 <= text.length <= 2000`
- `text` has only lowercase English letters.
