2733. Neither Minimum nor Maximum

Description

Given an integer array `nums` containing **distinct** **positive** integers, find and return **any** number from the array that is neither the **minimum** nor the **maximum** value in the array, or `-1` if there is no such number.

Return *the selected integer.*

Example 1:

```
Input: nums = [3,2,1,4]
Output: 2
Explanation: In this example, the minimum value is 1 and the maximum value is 4. Therefore, either 2 or 3 can be valid answers.
```

Example 2:

```
Input: nums = [1,2]
Output: -1
Explanation: Since there is no number in nums that is neither the maximum nor the minimum, we cannot select a number that satisfies the given condition. Therefore, there is no answer.
```

Example 3:

```
Input: nums = [2,1,3]
Output: 2
Explanation: Since 2 is neither the maximum nor the minimum value in nums, it is the only valid answer.
```

Constraints:

- `1 <= nums.length <= 100`
- `1 <= nums[i] <= 100`
- All values in `nums` are distinct
