242. Valid Anagram

Description

Given two strings `s` and `t` , return `true` *if* `t` *is an anagram of* `s` *, and* `false` *otherwise* .

An **Anagram** is a word or phrase formed by rearranging the letters of a different word or phrase, typically using all the original letters exactly once.

Example 1:

```
Input:  s = "anagram", t = "nagaram"
Output:  true
```

Example 2:

```
Input:  s = "rat", t = "car"
Output:  false
```

Constraints:

- `1 <= s.length, t.length <= 5 * 10`^{4}
- `s` and `t` consist of lowercase English letters.

Follow up: What if the inputs contain Unicode characters? How would you adapt your solution to such a case?
