1550. Three Consecutive Odds

Description

Given an integer array `arr`, return `true` if there are three consecutive odd numbers in the array. Otherwise, return `false`.

Example 1:

```
Input: arr = [2,6,4,1]
Output: false
Explanation: There are no three consecutive odds.
```

Example 2:

```
Input: arr = [1,2,34,3,4,5,7,23,12]
Output: true
Explanation: [5,7,23] are three consecutive odds.
```

Constraints:

- `1 <= arr.length <= 1000`
- `1 <= arr[i] <= 1000`
